

POLICY CONFLICT MINERALS

The TSM SENSORS S.R.L. company is actively committed to tracing the presence of *Conflict Minerals* within its products, to operate in a socially responsible manner, respecting human rights.

Conflict Minerals are minerals containing Tungsten, Tantalum, Tin and Gold (3TG) obtained from mines located in particular areas of the world affected by conflict or at high risk of conflict.

Trading or using these minerals could finance armed groups in conflict areas. TSM SENSORS S.R.L. has adopted a policy aimed at discouraging the purchase of products containing *Conflict Minerals*, through which:

- We **decide to source from suppliers who constantly monitor their supply chain**, to immediately identify any changes in the mineral composition of the raw materials purchased
- We implement **due diligence measures** towards the actors in our supply chain
- We take steps to **identify the source of the minerals** contained in the items we purchase by collecting information directly from our suppliers on a specific basis
- We require our suppliers to comply with the regulations, **preferring to source from mines and smelters** not present within the "Conflict Regions" or in any case from mines and smelters declared and certified as "**Conflict Free**" by a third party
- **We make available** to any of our customers who request it our **Declaration on Conflict Minerals** drawn up in accordance with the IPC-1755 standard
