

CHARACTERISTICS

- Measuring range up to 2.5 m
- Designed for installation into hydraulic cylinders
- High shock and vibration resistance
- M18x1.5 threaded connection
- Operating pressure up to 350 bar
- Customizable cursor

ADVANTAGES

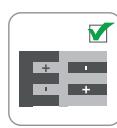

- Absolute contactless linear position measurement
- High resolution and linearity
- Unlimited mechanical life
- Rod, nipple and flange in AISI 316
- Easy installation and field replacement
- Position, speed and acceleration measurement

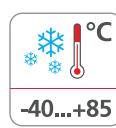

High protection level

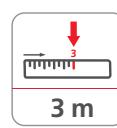

Shock/vibration resistant

Reverse polarity protection

Wide temp. range

Max. length: 3 m

Analog output

High accuracy

Directive 2011/65/EU

EU conformity

PRODUCT DESCRIPTION

MAG200 is a magnetostrictive position transducer with threaded connection, designed for mobile machines which can be installed inside oil-pressure cylinders.

The only external part is the head whose slim profile facilitates installation in confined spaces and allows easy maintenance operations. Its unique design, plus a wide range of cursor configurations, ensure easy installation and full compatibility with cylinder manufacturer specifications.

The temperature range from -40 to +85°C, the operating pressures up to 350 bar and the high resistance to vibration and shock make the sensor very robust, a fundamental feature in heavy-duty applications.

High performance in terms of transduction of measurement defined as linearity, hysteresis and repeatability.

TECHNICAL SPECIFICATION

Measuring range	0.1...2.5 m
Magnetostrictive resolution	0.1 mm
Magnetostrictive linearity (Ta = 25°C)	up to 250mm < ± 0.1 mm from 250 to 2500mm ±0.04% FS
Magnetostrictive repeatability (Ta = 25°C)	±0.1 mm
Operating pressure	According to EN 13480-5 350 bar (Peak: 500 bar)
Protection class	IP67
Temperature range	-40°C ... +85°C
Temperature coefficient	±0.004 % FS/°C
Housing	Head and rod: stainless steel AISI316
Rod diameter	10 mm
Shock resistance	acc. to EN 60068-2-27 30 G, 11 ms 100 Shocks per axis
Vibration resistance	acc. to EN 60068-2-6 10 ... 150 Hz

OPERATING PRINCIPLE

The operating principle is based on the magnetostrictive effect. The application of periodic short current pulses in the magnetostrictive wire generates an induced magnetic field. The interaction of the magnetic cursor, connected to the moving object in the application, with this field generates a momentary torsional strain on the magnetostrictive wire which propagates along it as in a waveguide. When the ultrasonic wave reaches the end of the guide, it is detected by a sensitive element which converts it into an electrical signal. Since the velocity of propagation is known, the linear position is computed by measuring the time-of-flight of the pulse.

ELECTRICAL CHARACTERISTICS

Power supply range	see order code
Startup time	200 ms
Inrush current	1.5A - 2ms @ 12VDC
Current consumption. (with load at FS)	Current output: 58 mA (12 VDC); 43 mA (24 VDC) Voltage output: 34 mA (12 VDC); 19 mA (24 VDC)
Load resistor	> 10 kOhm, voltage output type < 500 Ohm, current output type
Electromagnetic compatibility	acc. to EN 61000-6-2, EN 61000-6-4
EU conformity	EMC directive 2014/30/EU RoHS directive 2011/65/EU + 2015/863/EU

ELECTRICAL CONNECTION M12 X 4 PINS

Pinout	
1	+Vin
2	n.c.*
3	GND
4	V / I out

* = PIN MARKED n.c. MUST NOT BE CONNECTED
Applying a voltage to this pin can damage the device!

ELECTRICAL CONNECTION M12 X 8 PINS

Pinout	
1	V / I out
2	Signal GND

MAGNETOSTRICTIVE SENSOR

Absolute measuring length up to 2.5 m linear position transducer

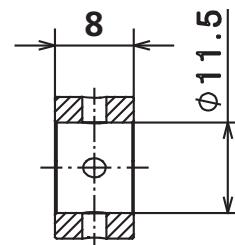

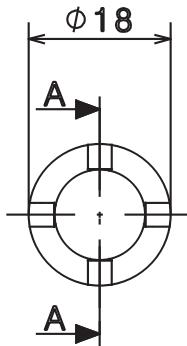

CURSOR TYPES

1] Magnetic cursor 18 x 10 mm - AW2011 anodized**

Section A-A

2] Magnetic cursor 18 x 8 mm - AW2011 anodized**

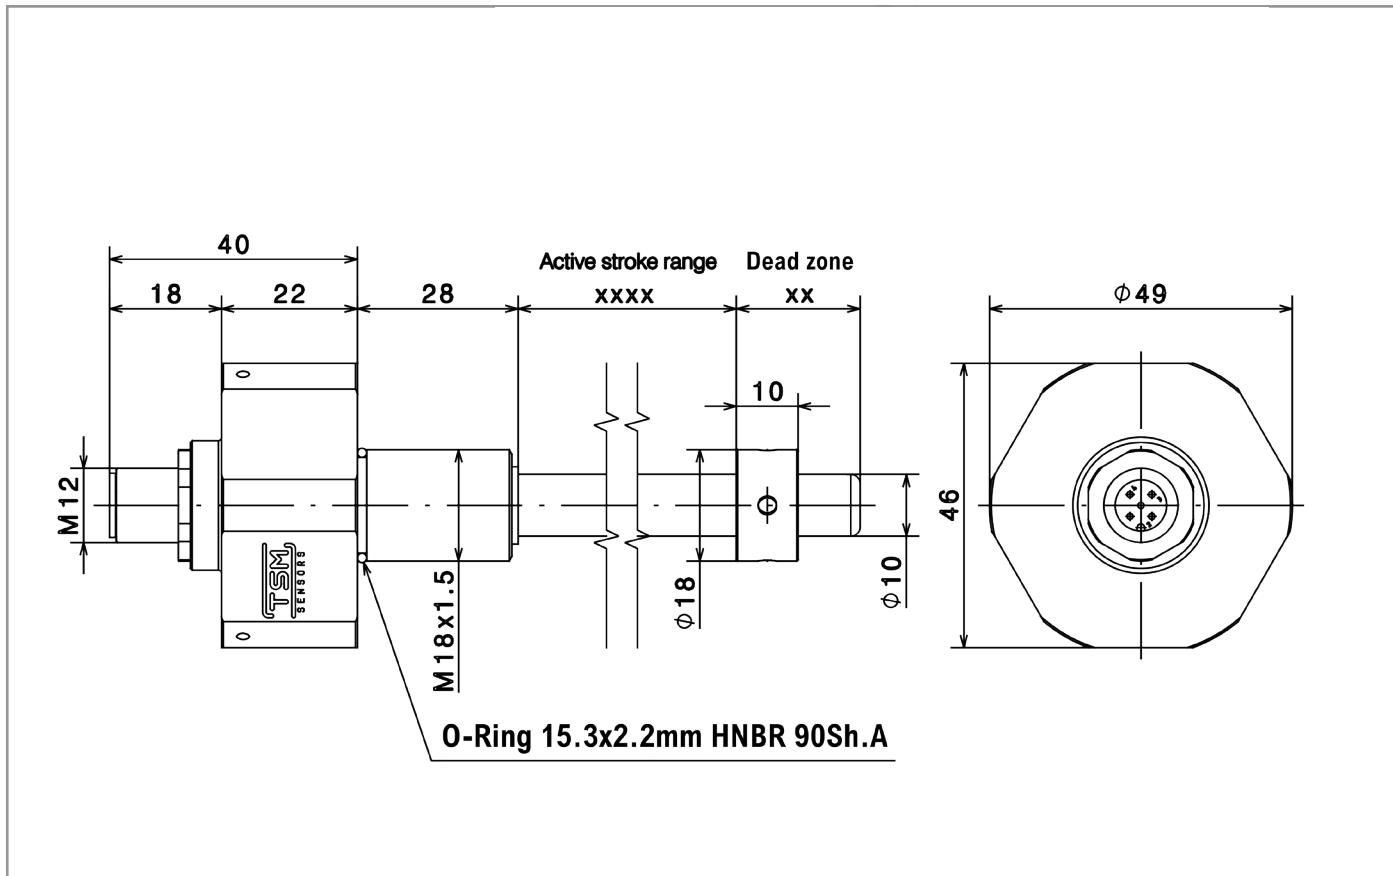

Section A-A

**Do not separate the magnetic cursor from the sensor. For correct operation, each sensor must be mounted in the cylinder with its own supplied cursor.

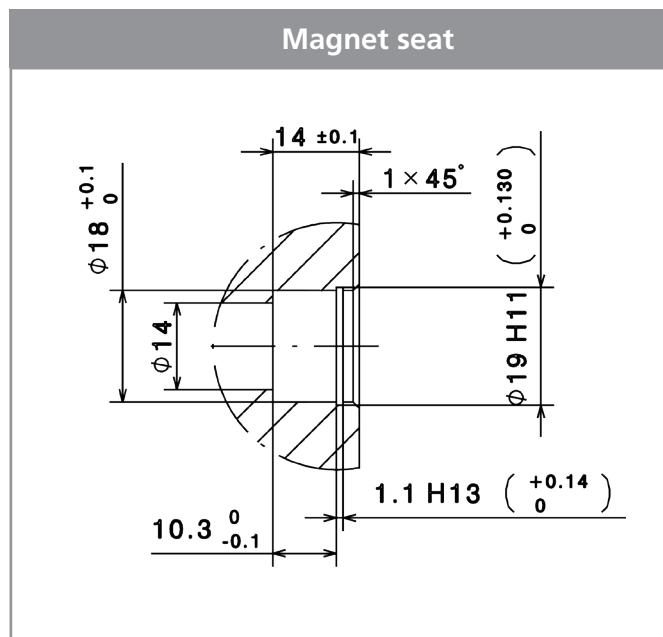

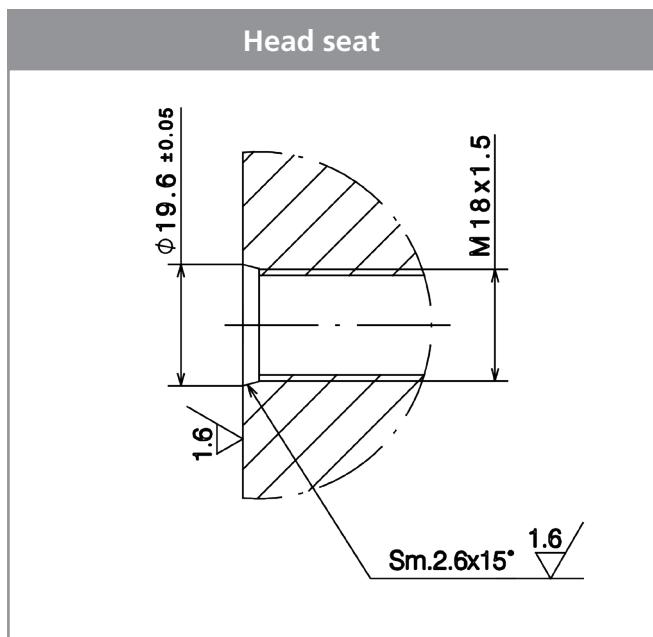

The company reserves the right to make any kind of design or functional modification at any moment without prior notice.

DIMENSIONS [mm]

L.4 - DS0040 R01 MAG200 Analog - 08/11/24

WARNING: For installation apply a maximum tightening torque of 60 Nm
